

# DINOSAUR FEET

How big were dinosaurs in "feet"?

---

Draw out with chalk or on paper a dinosaurs foots print and see how many of your feet fit inside. Trace your footprints so you can see the difference!

| DINOSAUR    | FEET SIZE           | HOW MANY OF YOUR FEET FIT? |
|-------------|---------------------|----------------------------|
| APATOSAURUS | 48" long x 24" wide |                            |
| TRICERATOPS | 39" x 39"           |                            |
| DEINONYCHUS | 9" x 3"             |                            |

**Suggested Materials: Measuring Tape, Chalk or Writing Utensil, Paper (if you're not using chalk)**

## QUESTIONS TO CONSIDER

---

Which dinosaur do you think is the biggest based on their footprint size?

Discuss why scientists study dinosaur tracks. How do footprint records tell us whether a dinosaur walked on two or four legs, how much they weighed, or how fast they could run? What else could they tell us?
