## MOST Analyzing Data: Height vs. Arm Span Proportions

 Materials:- Measuring tape
- Data provided below
- A pencil

A group of employees at the MOST noticed that their arm span (from the middle finger tip of one hand to the other) looked very similar to how tall they were. To find out if their hypothesis was correct, they recorded their measurements below:

| NAME | ARM SPAN <br> $(\mathrm{cm})$ | HEIGHT <br> $(\mathrm{cm})$ |
| :---: | :---: | :---: |
| Carissa | 158 | 160 |
| Emily | 170 | 170 |
| Mint | 173 | 175 |
| YOU |  |  |

What conclusions can you draw from this data?
Divide the arm span by the height to find the ratio. What do you notice?
