ADVANCING INDIGENOUS SCIENCE AND ENGINEERING SOCIETY

The Advancing Indigenous Science and Engineering Society (AISES) is a national nonprofit organization founded in 1977 to address the lack of Indigenous representation in higher education and science, technology, egineering, and mathematics (STEM) fields.

Their mission is to uplift Indigenous voices and increase Indigenous representation in STEM throughout North America and the Pacific Islands. The society has more than 7,300 individual members, representing over 500 Indigenous nations.

Students are supported with college-readiness education, financial literacy courses, scholarship opportunities, and a supportive network of Indigenous peers and mentors.

STEM educators are provided with culturally relevant courses and college-readiness resources and can participate in the National American Indian Science & Engineering Fair (NAISEF).

STEM professionals are offered career support programs, mentors, job search assistance, and networking opportunities.

SPOTLIGHT ON:
THE CENTER FOR NATIVE PEOPLES AND THE ENVIRONMENT

The Center for Native Peoples and the Environment at SUNY ESF creates programs that draw on both western scientific knowledge and Indigenous ecological knowledge in support of the "shared goals of environmental sustainability."

Through the Center, learners explore traditional cultural philosophies and practices as well as environmental science tools and approaches.

ESF Center

The Center is also focused on increasing opportunities and support for Native American students in the fields of science and research relating to the environment, including those in the school's Sloan Indigenous Graduate Program.

The Center also provides opportunities for Native American students to participate in research collaboration and partnerships with Native American communities in relation to the local environment and issues of local concern.

Founded by Dr. Robin Wall Kimmerer and now led by Neil Patterson, Jr. and an advisory board of Indigenous environmental leaders, you can find out more about their programs and resources by scanning the QR code below.
